

# WHAT COULD THESE CONNECTIONS LOOK LIKE IN WARKWORTH

The options for new and upgraded connections could be in the form of arterials or collectors.

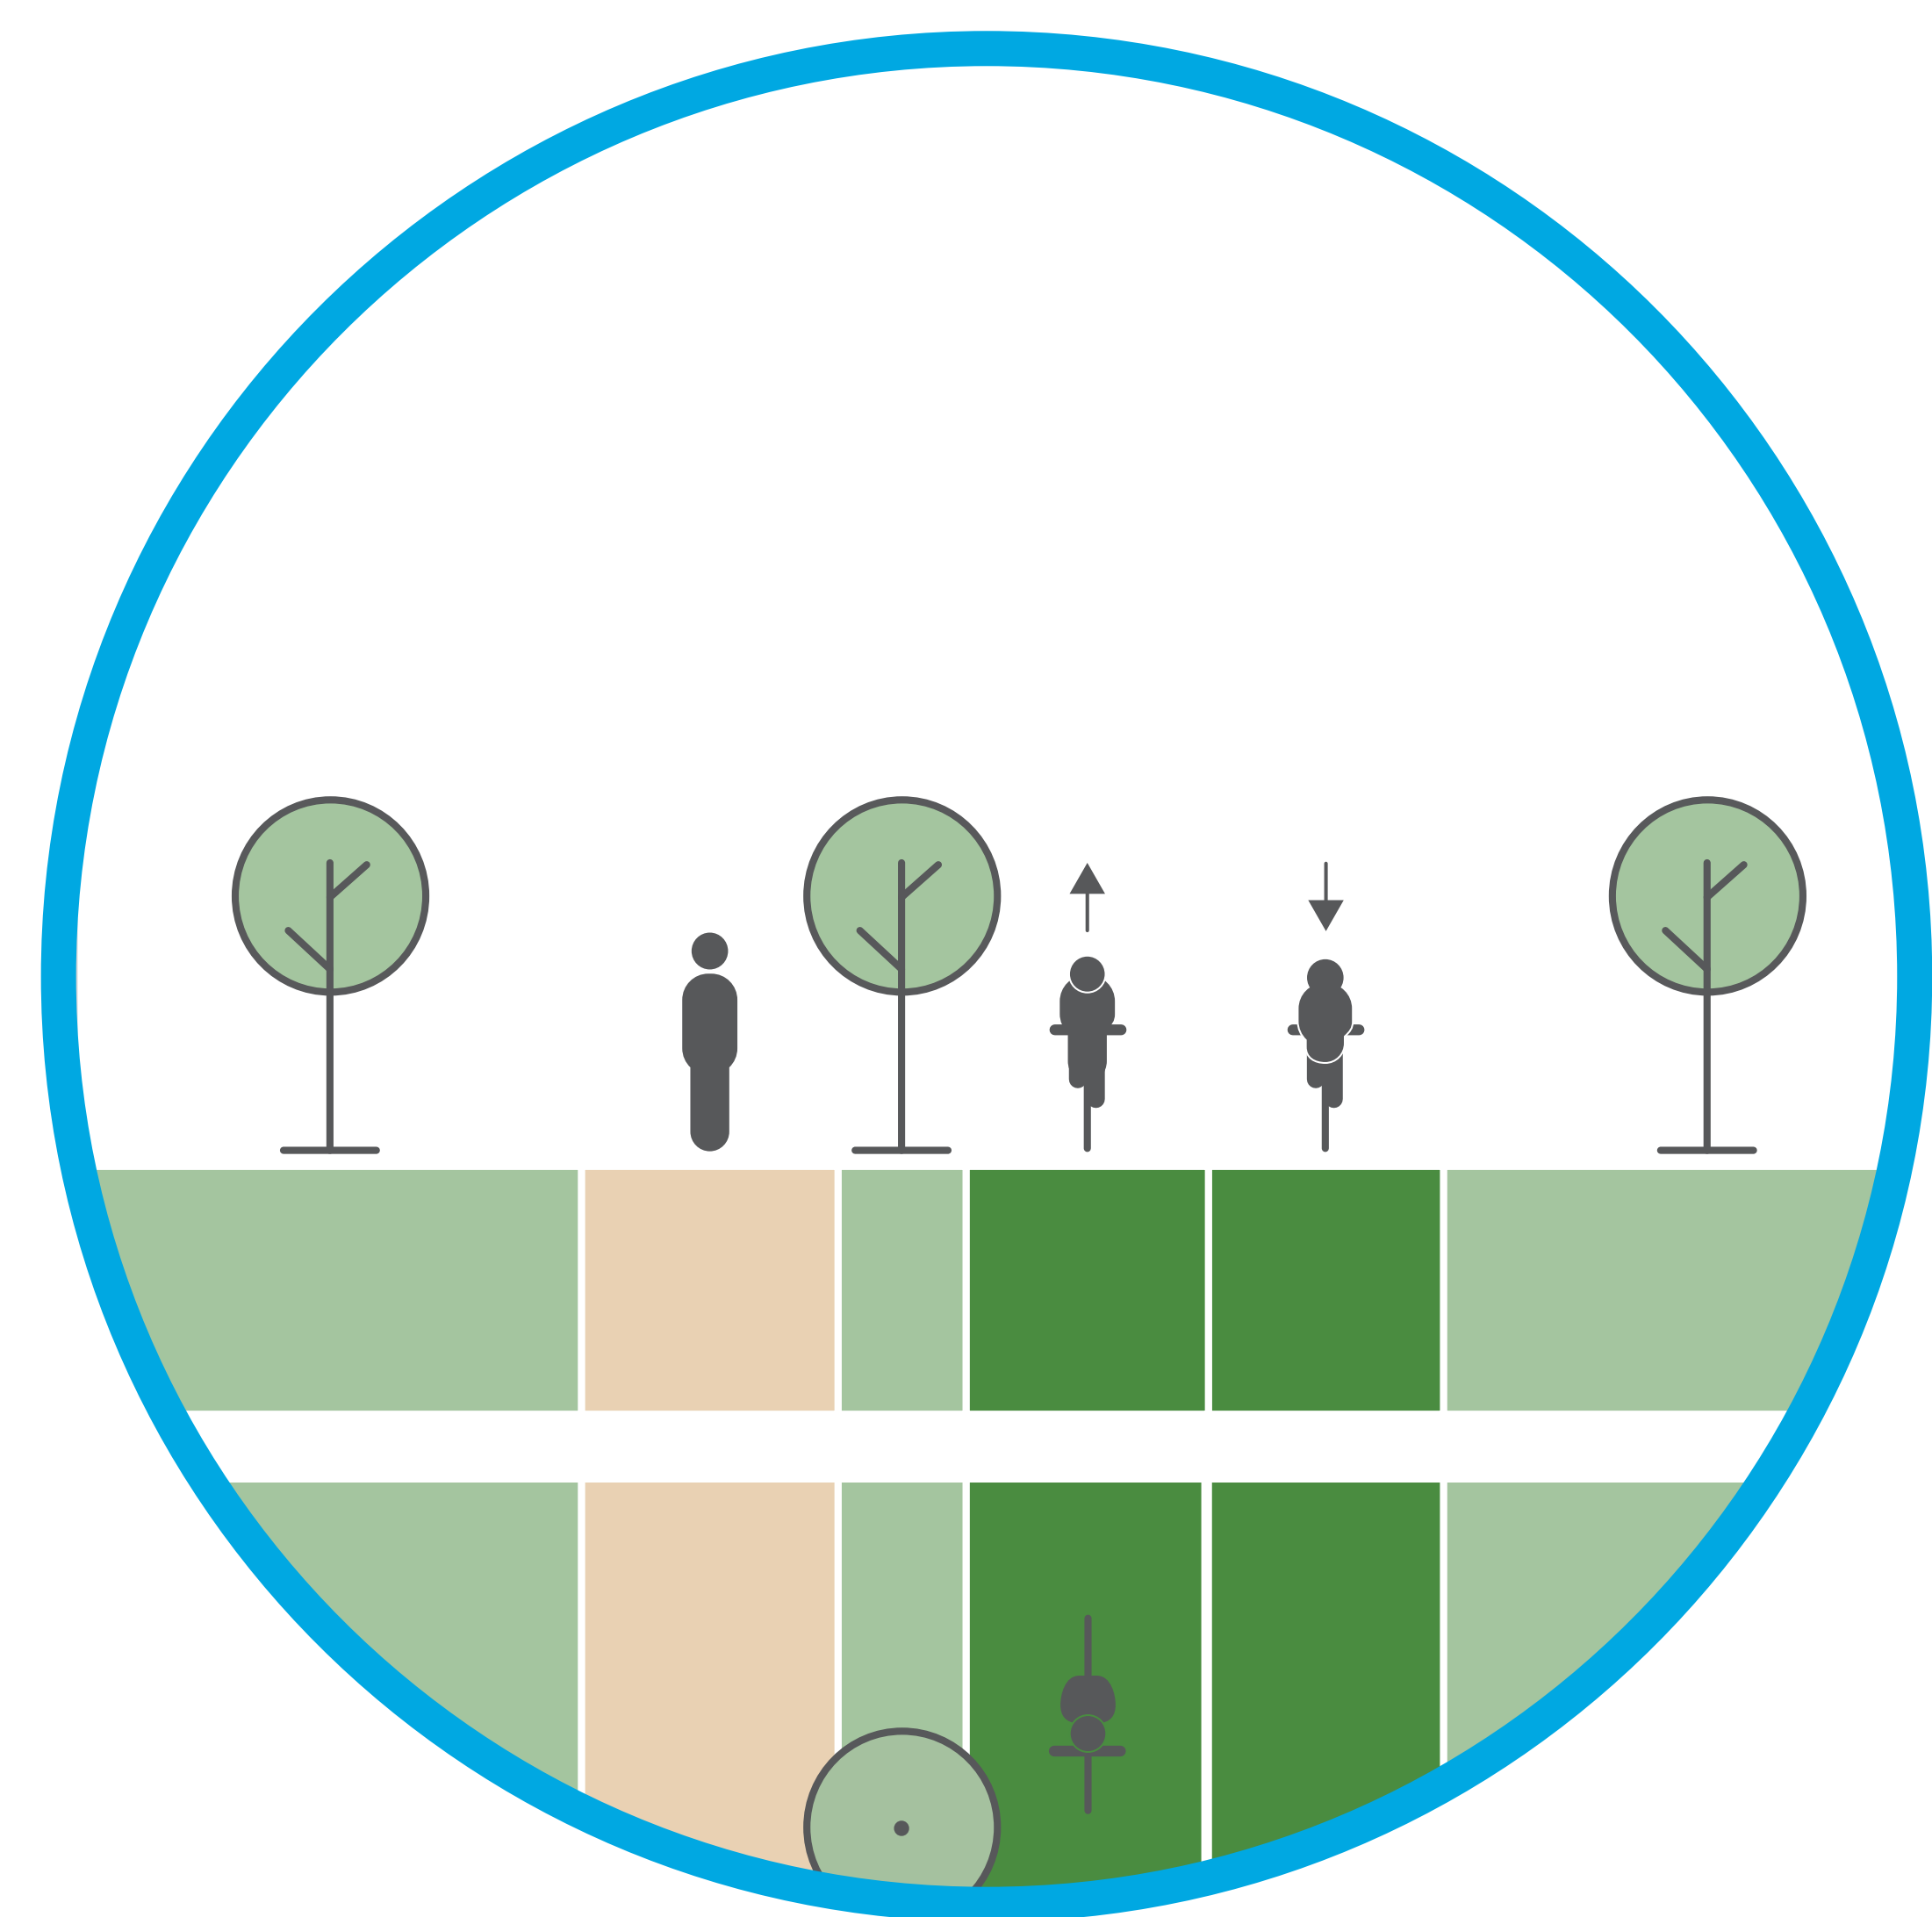

## Arterials

- Have a variety of land uses on either side (e.g. offices, retail, education and housing) and support greater numbers of traffic than collectors
- May be 2 or 4 lanes for traffic, with limited parking
- Include good streetscape amenity including planting, pedestrian crossings, cycling facilities and bus priority lanes.

## Collectors

- Have similar land uses on either side with direct access provided to properties
- Support less traffic than arterials
- Are likely to be 2 lanes for traffic
- Include good streetscape amenity such as planting, pedestrian crossings and cycling facilities.

## CYCLEWAYS

## URBAN ROADS
